We keep life flowing

For intensive use

The STRACK Intense is designed to facilitate the infusion management of Intensive Care units, today and in the future. With up to nine pump positions, this system can be optimally used for complex treatments.

Data communication

In order to have access to and a good overview of all patient and infusion related information the STRACK Intense system is equipped with one central data connection for up to nine pumps, capable of linking to your Patient Data Monitoring System (PDMS).

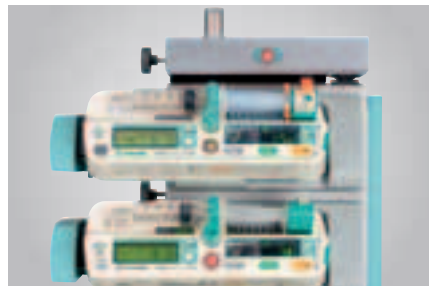

Compatibility

The system gives you the possibility to combine all of the Terumo syringe pump types. Basic pumps as well as the more specialised pumps (TIVA / TCI) can be used in one configuration.

Alarm monitor

When any of the pumps gives an alarm, a general operation indicator on top of the STRACK Intense system will light up in red.

User friendliness

Pumps are easily added to or removed from the STRACK Intense by opening the arm, sliding the pump in place, and closing the arm. It takes a minimum of effort and time.

Stability

Because of the design of the STRACK Intense the pumps are completely protected against accidental pushing or breaking. Furthermore stability is guaranteed thanks to the central positioning of the pumps and the solid base.

Product specifications

STRACK Intense modules

Each module contains three places to stack compatible pumps:

- Strack Intense 33 Module: Compatible with TE-331, TE-332
- Strack Intense 37 Module: Compatible with TE-371, TE-372

Power Supply

200 - 240 VAC (I/O)

External communication

RS - 232

Classification (acc. to MDD)

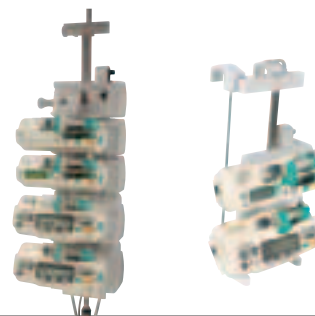

Class 1

Compliance

MDD 93/42/EEC

Also available to cover your needs for general wards and transportation
