

Versatus™-W

Intravenous catheter with wings /
and injection port

**Smooth venous access
Better comfort for the patient**

Material

The catheter is made from polyurethane (PUR) which is firm at room temperature and softer at body temperature, kink resistant and biocompatible: patient comfort is enhanced. This catheter is radio-opaque.

Internal needle

The quality of the bevel of the internal needle ensures a precise incision.

Conical catheter tip

The perfectly tapered catheter tip allows the catheter to enter the vein without causing any venous trauma and an easy placement of the catheter. In this way the comfort of the patient is guaranteed. The optimal bevel/catheter tip distance reduces the risk of passing through the vein.

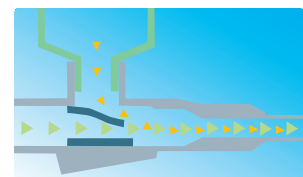

Winged catheter hub

The wings ensure easy fixation of the catheter. The EN/ISO coloured hub of the VERSATUS™-W with wings confirms the catheter size.

Injection port

This allows the intermittent injection of medicines during infusion. Due to central position, there are less risks for damaging the vein and patient trauma during intermittent injection.

Flashback

The flashback chamber is transparent for easy detection of the flashback. A venting plug, having an hydrophobic filter, allows the passage of air, ensures reliable closure to avoid any risk of

contamination. The Luer Lock cap allows the extremity of the catheter to be closed after withdrawal of the internal needle.

Obturator

A Luer Lock obturator with the same colour code as the catheter is available for each gauge (except gauge 26). This prevents the formation of clots in the lumen of the catheter due to any interrupted use.

Every day,
as healthcare
professionals,
you are working
to ensure life
and to contribute to
the well-being
of your patients.

Every day,
Terumo Europe
provides you with
the clinical systems,
means and solutions
to keep life flowing.

We keep life flowing
